Any operations on the telescope/instruments that may create external motion should be planned in advance by submitting a request for the Daily Planning Meeting: <https://app.smartsheet.com/b/form?EQBCT=7bfac323f0a646069b152abd8124d647>.

Al has done this for SHARK in the past.

If testing is entirely internal, an email to [telescopework@lbto.org](mailto:telescopework@lbto.org) should suffice. This will allow others to know what is intended and inform everyone to be alert for vibrations or other abnormal behavior. You should monitor email for replies which may request you to stop testing in case interference with scheduled testing is observed. Also please send an email when testing is complete.

Pat
